

ISSUE BRIEF

General Fund Revenue and Expenditure Forecasts Changes from Previous Forecast April 8, 2002

Any forecast of state revenues and formula driven expenditures for a specific time period is likely to vary from the final data for that time period. The goal of state budget forecasters is to present the most likely scenario given current economic data, the state economic situation, and other data affecting the forecast. Subsequent forecast for the same time period are based on more recent data and are very likely to project different revenue and expenditure numbers.

Minnesota law requires the Commissioner of Finance to prepare forecasts of state revenues and expenditures twice each year. These forecasts must be presented in February and November. The November forecast usually shows a greater variance from the previous forecast than does the February forecast. This is logical since the November forecast variance occurs over a nine month period, the February forecast occurs only three months after the November forecast.

Each subsequent forecast highlights the variance from the previous forecast. A forecast also takes into account any intervening legislative action. For a long period in the mid and late 1990s, forecast variances were positive. However, the three most recent forecasts have had negative variances.

These forecast variances, for the most part, represent what becomes called a “surplus” or “deficit” once the forecast is released. A surplus could be larger than the forecast variance if the laws enacted in the previous legislative session left an available balance or money “on the bottom line.” A surplus could be less than the forecast variance if the enacted laws put into place a mechanism to use some of a potential surplus. As an example, legislation enacted in 1999 made a \$50 per pupil unit increase in the K-12 general education formula contingent on the November 1999 forecast indicating that adequate resources were available. This used \$43 million of the variance indicated by the November 1999 forecast. In a similar manner, the 2001 legislature left \$235 million unspent – that amount reduced the deficit projected by the November 2001 forecast.

The chart on the following pages shows changes in the general fund revenue and expenditure forecasts presented in the months listed. Changes are compared to the previous forecast. Legislation passed between forecasts may also impact the revenues and expenditures being forecast. These forecast variances represent changes within a biennium once the budget has been enacted for that biennium. (As an example, the number shown for the November 1998 forecast is for the FY 1998-99 biennium and does not include the FY 2000-01 biennium.) The first forecast completed after the previous biennium is closed out includes any unrestricted balance carried over from that previous biennium. (As an example, the November 1999 forecast for FY 2000-01 included a \$453 million balance carried forward from the close of FY 1999.) However, beginning in 2001 with the balance for the biennium ending June 30, 2001, balances are directed to a tax relief account, a reserve account in the general fund.

The years listed indicate the biennium for which the forecast applies.

The graph on the final page illustrates the forecast variances since November 1989.

<u>Forecast Date</u>	<u>Change</u>	<u>Biennium Affected</u>
Nov. 1986	Forecast up \$11 million	1986-87
Jan. 1986	Forecast up \$92.7 million	1986-87
Mar. 1987	Forecast up \$28 million	1986-87
Jan. 1988	Forecast up \$223 million	1988-89
Nov. 1988	Forecast up \$531 million	1988-89
Mar. 1989	Forecast up \$63 million	1988-89
Nov. 1989	Forecast down \$178 million	1990-91
Feb. 1990	Forecast up \$16 million	1990-91
Nov. 1990	Forecast down \$179 million	1990-91
Mar. 1991	Forecast up \$23 million	1990-91
Nov. 1991	Forecast down \$394 million (Includes positive carry forward of \$31 million from FY 91)	1992-93
Feb. 1992	Forecast down \$277 million (a)	1992-93
Nov. 1992	Forecast up \$215 million	1992-93

Mar. 1993	Forecast up 197 million	1992-93
Nov. 1993	Forecast up \$414 million (Includes positive carry forward of \$118 million from FY 93)	1994-95
Mar. 1994	Forecast up \$193 million	1994-95
Nov. 1994	Forecast up \$138 million	1994-95
Feb. 1995	Forecast up \$115 million	1994-95
Nov. 1995	Forecast up \$824 million (Includes positive carry forward of \$135 million from FY 95)	1996-97
Feb. 1996	Forecast up \$49 million	1996-97
Nov. 1996	Forecast up \$792 million	1996-97
Feb. 1997	Forecast up \$344 million	1996-97
Nov. 1997	Forecast up \$1,328 million (b) (Includes positive carry forward of \$364 million from FY 95)	1998-99
Feb. 1998	Forecast up \$592 million	1998-99
Nov. 1998	Forecast up \$1,526 million (c)	1998-99
Feb. 1999	Forecast up \$282 million	1998-99
Nov. 1999	Forecast up \$1,597 million (d) (Includes positive carry forward of \$453 million from FY 99)	2000-01
Feb. 2000	Forecast up \$229 million	2000-01
Nov. 2000	Forecast up \$915 million	2000-01
Feb. 2001	Forecast down \$66 million	2000-01
Nov. 2001	Forecast down \$2,101 million (e)	2002-03
Feb. 2002	Forecast down \$336 million	2002-03

(a) The \$277 million is a net figure after accounting for \$49 million of court overturned vetoes not previously accounted for.

(b) The \$1,328 million includes \$81 million allocated for education tax credits and \$826 million to the property tax reform account. These items were enacted by a mechanism that was triggered by the amount of the unrestricted balance that became available as of the November 1997 forecast.

- (c) The \$1,526 million includes \$400 million allocated to replace bonds for capital projects, \$200 million to a tax reform account and \$9 million to the budget reserve.
- (d) The \$1,597 million includes \$50 million for an addition to the sales tax rebate and \$43 million for a \$50 per pupil unit increase in the K-12 education general education formula for FY 2001. These items were enacted by mechanisms that were triggered by the amount of the unrestricted balance that became available as of the close of the FY 1999 and the November forecast.
- (e) The forecast change was a negative \$2,101 million, the end of the 2001 session balance was \$235 million leaving a net deficit of \$1,953 million.
