Tax Increment Financing

What is TIF?

Tax increment financing (TIF) uses the increased property taxes that a new real estate development generates to finance costs of the development. In Minnesota, TIF is used for two basic purposes:

- To induce or cause a development or redevelopment that otherwise would not occur—e.g., to convince a developer to build an office building, retail, industrial, or housing development that otherwise would not be constructed. To do so, the increased property taxes are used to pay for costs (e.g., land acquisition or site preparation) that the developer would normally pay.
- To finance public infrastructure (streets, sewer, water, or parking facilities) that are related to the development. In some cases, the developer would be required to pay for this infrastructure through special assessments or other charges. In other cases, all taxpayers would pay through general city taxes.

How does TIF work?

When a new TIF district is created, the county auditor certifies (1) the current net tax capacity (i.e., property tax base) of the TIF district and (2) the local property tax rates. As the net tax capacity of the district increases, the property taxes (i.e., the “tax increment”) paid by this increase in value is dedicated and paid to the development authority. The tax increment is limited to the tax derived from the certified tax rate. Increases in value that generate increment may be caused by construction of the development or by general inflation in property values. The authority uses the increment to pay qualifying costs (e.g., land acquisition, site preparation, and public infrastructure) that it has incurred for the TIF project.

How is TIF used to pay “upfront” development costs?

There is a mismatch between when most TIF costs must be paid—at the beginning of a development—and when increments are received—after the development is built and begins paying higher property taxes. Three basic financing techniques are used to finance these upfront costs:

- **Bonds.** The authority or municipality (city or county) may issue its bonds to pay these upfront costs and use increment to pay the bonds back. Often, extra bonds are issued to pay interest on the bonds (“capitalizing” interest) until increments begin to be received.
- **Interfund loans.** In some cases, the authority or city may advance money from its own funds (e.g., a development fund or sewer and water fund) and use the increments to reimburse the fund.
- **Pay-as-you-go financing.** The developer may pay the costs with its own funds. The increments, then, are used to reimburse the developer for these costs. This type of developer financing is often called “pay-as-you-go” or “pay-go” financing.

What governmental units can use TIF?

Minnesota authorizes development authorities to use TIF. These authorities are primarily housing and redevelopment authorities (HRAs), economic...
development authorities (EDAs), port authorities, and cities. In addition, the “municipality” (usually the city) in which the district is located must approve the TIF plan and some key TIF decisions. TIF uses the property taxes imposed by all types of local governments. But the school district and county, the two other major entities imposing property taxes, are generally limited to providing comments to the development authority and city on proposed uses of TIF. The state-imposed tax on commercial-industrial and seasonal-recreational properties is not captured by TIF.

**What is the but-for test?**

Before an authority may create a TIF district, it and the city must make “but-for” findings that (1) the development would not occur without TIF assistance and (2) that the market value of the TIF development will be higher (after subtracting the value of the TIF assistance) than what would occur on the site, if TIF were not used.

**What types of TIF districts may be created?**

Minnesota allows several different types of TIF districts. The legal restrictions on how long increments may be collected, the sites that qualify, and the purposes for which increments may be used vary with the type of district.

**How many TIF districts exist?**

According to the 2014 report of the Office of State Auditor (OSA), there were 1,784 active TIF districts in 2012. The graph shows the relative shares by type of district.
