

## Increase SCORE funding to meet challenging recycling goals

Support for H.F. 2367 to amend solid waste management tax allocation

Minnesota law requires counties to implement recycling programs to achieve state recycling goals, including recycling 75% of metro waste by 2030. Counties need greater state investment in SCORE grants to meet today's more complicated solid waste challenges, achieve increasingly difficult recycling goals and keep valuable materials out of landfills.

**State allocations to SCORE grants have not kept pace with state recycling goals.** The state raised the metro recycling goal from 50% to 75% in 2014 without addressing the funding needed to achieve it. While revenues from the Solid Waste Management Tax (SWMT) have been increasing, little of that increase has been used to fund SCORE.

- A shrinking percentage of SWMT revenues is used for SCORE grants, much less than the 30% of revenues diverted to the state's general fund.
- The PWE counties spend three times more on waste prevention and recycling than they receive in state SCORE grants.

**Investments in waste prevention, reuse and recycling are needed now.** Significant forward-looking investments are needed for waste prevention, reuse and recycling infrastructure to push beyond our current wins and onto new challenges. Current SCORE allocations are insufficient to make these capital- and operationally-intensive investments.

- Minnesota has spent \$400 million so far on cleaning up landfills. We need to prioritize resources to keep materials out of landfills through prevention, reuse and recycling.
- Organics recycling is the biggest opportunity to avoid landfilling. It will not happen without significant expansion of collection and processing infrastructure and extensive educational efforts.
- Even with currently high recycling rates, the market value of materials lost to the waste stream in the PWE counties is estimated to be more than \$50 million per year. Strategic investments in recycling infrastructure and programs can put these materials to work for Minnesota's economy and jobs.
- Waste reduction and reuse offer the best environmental payoffs. County successes with current efforts such as Fix-It Clinics are only a start—bigger impacts will take more resources.
