

1.1 ..... moves to amend H.F. No. 3265, the second engrossment, as follows:

1.2 Page 3, delete subdivision 6 and insert:

1.3 "Subd. 6. **Public water system.** As part of its remediation plan, the district or charter  
1.4 school must coordinate with the public water system to determine who owns the  
1.5 infrastructure, such as the service lines, gooseneck, meters, joins, or other connectors,  
1.6 connecting the water mains to the school buildings and the composition of the infrastructure.  
1.7 If it is determined through testing or based on plumbing records that the infrastructure is  
1.8 composed of or contains lead, the school must coordinate with the city on a plan for  
1.9 replacement. The district or charter school is financially responsible for remediating only  
1.10 the infrastructure it owns. Long term remediation steps such as building-wide fixtures or  
1.11 plumbing replacements may be deferred until the infrastructure that is composed of or  
1.12 contains lead is replaced. Long term remediation steps such as building-wide fixture or  
1.13 plumbing replacements may be deferred as long as the water system meets the requirements  
1.14 in the federal Lead and Copper Rule. A school district or charter school must not defer  
1.15 interim measures, including shutting off fixtures, flushing, water management, providing  
1.16 bottled water, or providing filters, to reduce lead exposure based on the Department of  
1.17 Health's document, "Reducing Lead in Drinking Water: A Technical Guidance for  
1.18 Minnesota's School and Child Care Facilities" or the United States Environmental Protection  
1.19 Agency's document, "3T's for Reducing Lead in Drinking Water."
