

Dear Chair Richardson and the Education Policy Committee,

I am writing to you to voice my support for HF 550. By providing education in schools on Climate Justice it ensures that our planet can provide a thriving home to future generations. As a High School Senior who has spent 13 years in Minnesota public schools, I wish I had formal education on climate change and on what to do to stop it. Requiring climate justice education in Minnesota schools will make students aware of the damage that climate change has done to our earth and give them ideas for what they can do to make sure that their children, grandchildren, and great-grandchildren can call Earth their home.

Thank you for your time and consideration.

Sincerely,

Taubie Sanders
