**Subject** Energy storage systems**Authors** Hollins**Analyst** Bob Eleff**Date** March 10, 2021

## **Summary**

House File XXXX (BE076) requires the Minnesota Public Utilities Commission to include in an order regarding a utility's integrated resource plan a requirement that the utility install one or more energy storage systems, taking into account the utility's analysis of such systems in its plan. Within a year of the order, the utility is required to file an application with the commission that includes technical specifications of the proposed energy storage system, its cost-effectiveness, and expected benefits to the utility's grid.
